Smart Cities and Autonomous Vehicles

The Dumb City

”a municipality that stubbornly refuses new technology and clings to obsolete and inefficient practices.”

Source: Ben Green (2019): The Smart Enough City, MIT Press, p.10.

The smartness of the city

Smartness understood as the **capacity to adapt** (adaptability)

Adaptation through
utilization and exploitation
of knowledge about
citizens
(learning from the past)

Adaptation through
learning from the citizen
(refined learning from citizens
thanks to continuous interactions
between citizens and the city)

Adaptation through a
relational and proactive
orientation
(relationship innovation and
development of innovative solutions)

Making Up the Smart City - Configuration, Coordination & Orchestration

Configuration

Relative arrangement
of parts or elements

Coordination

Harmonious functioning
of parts for effective results

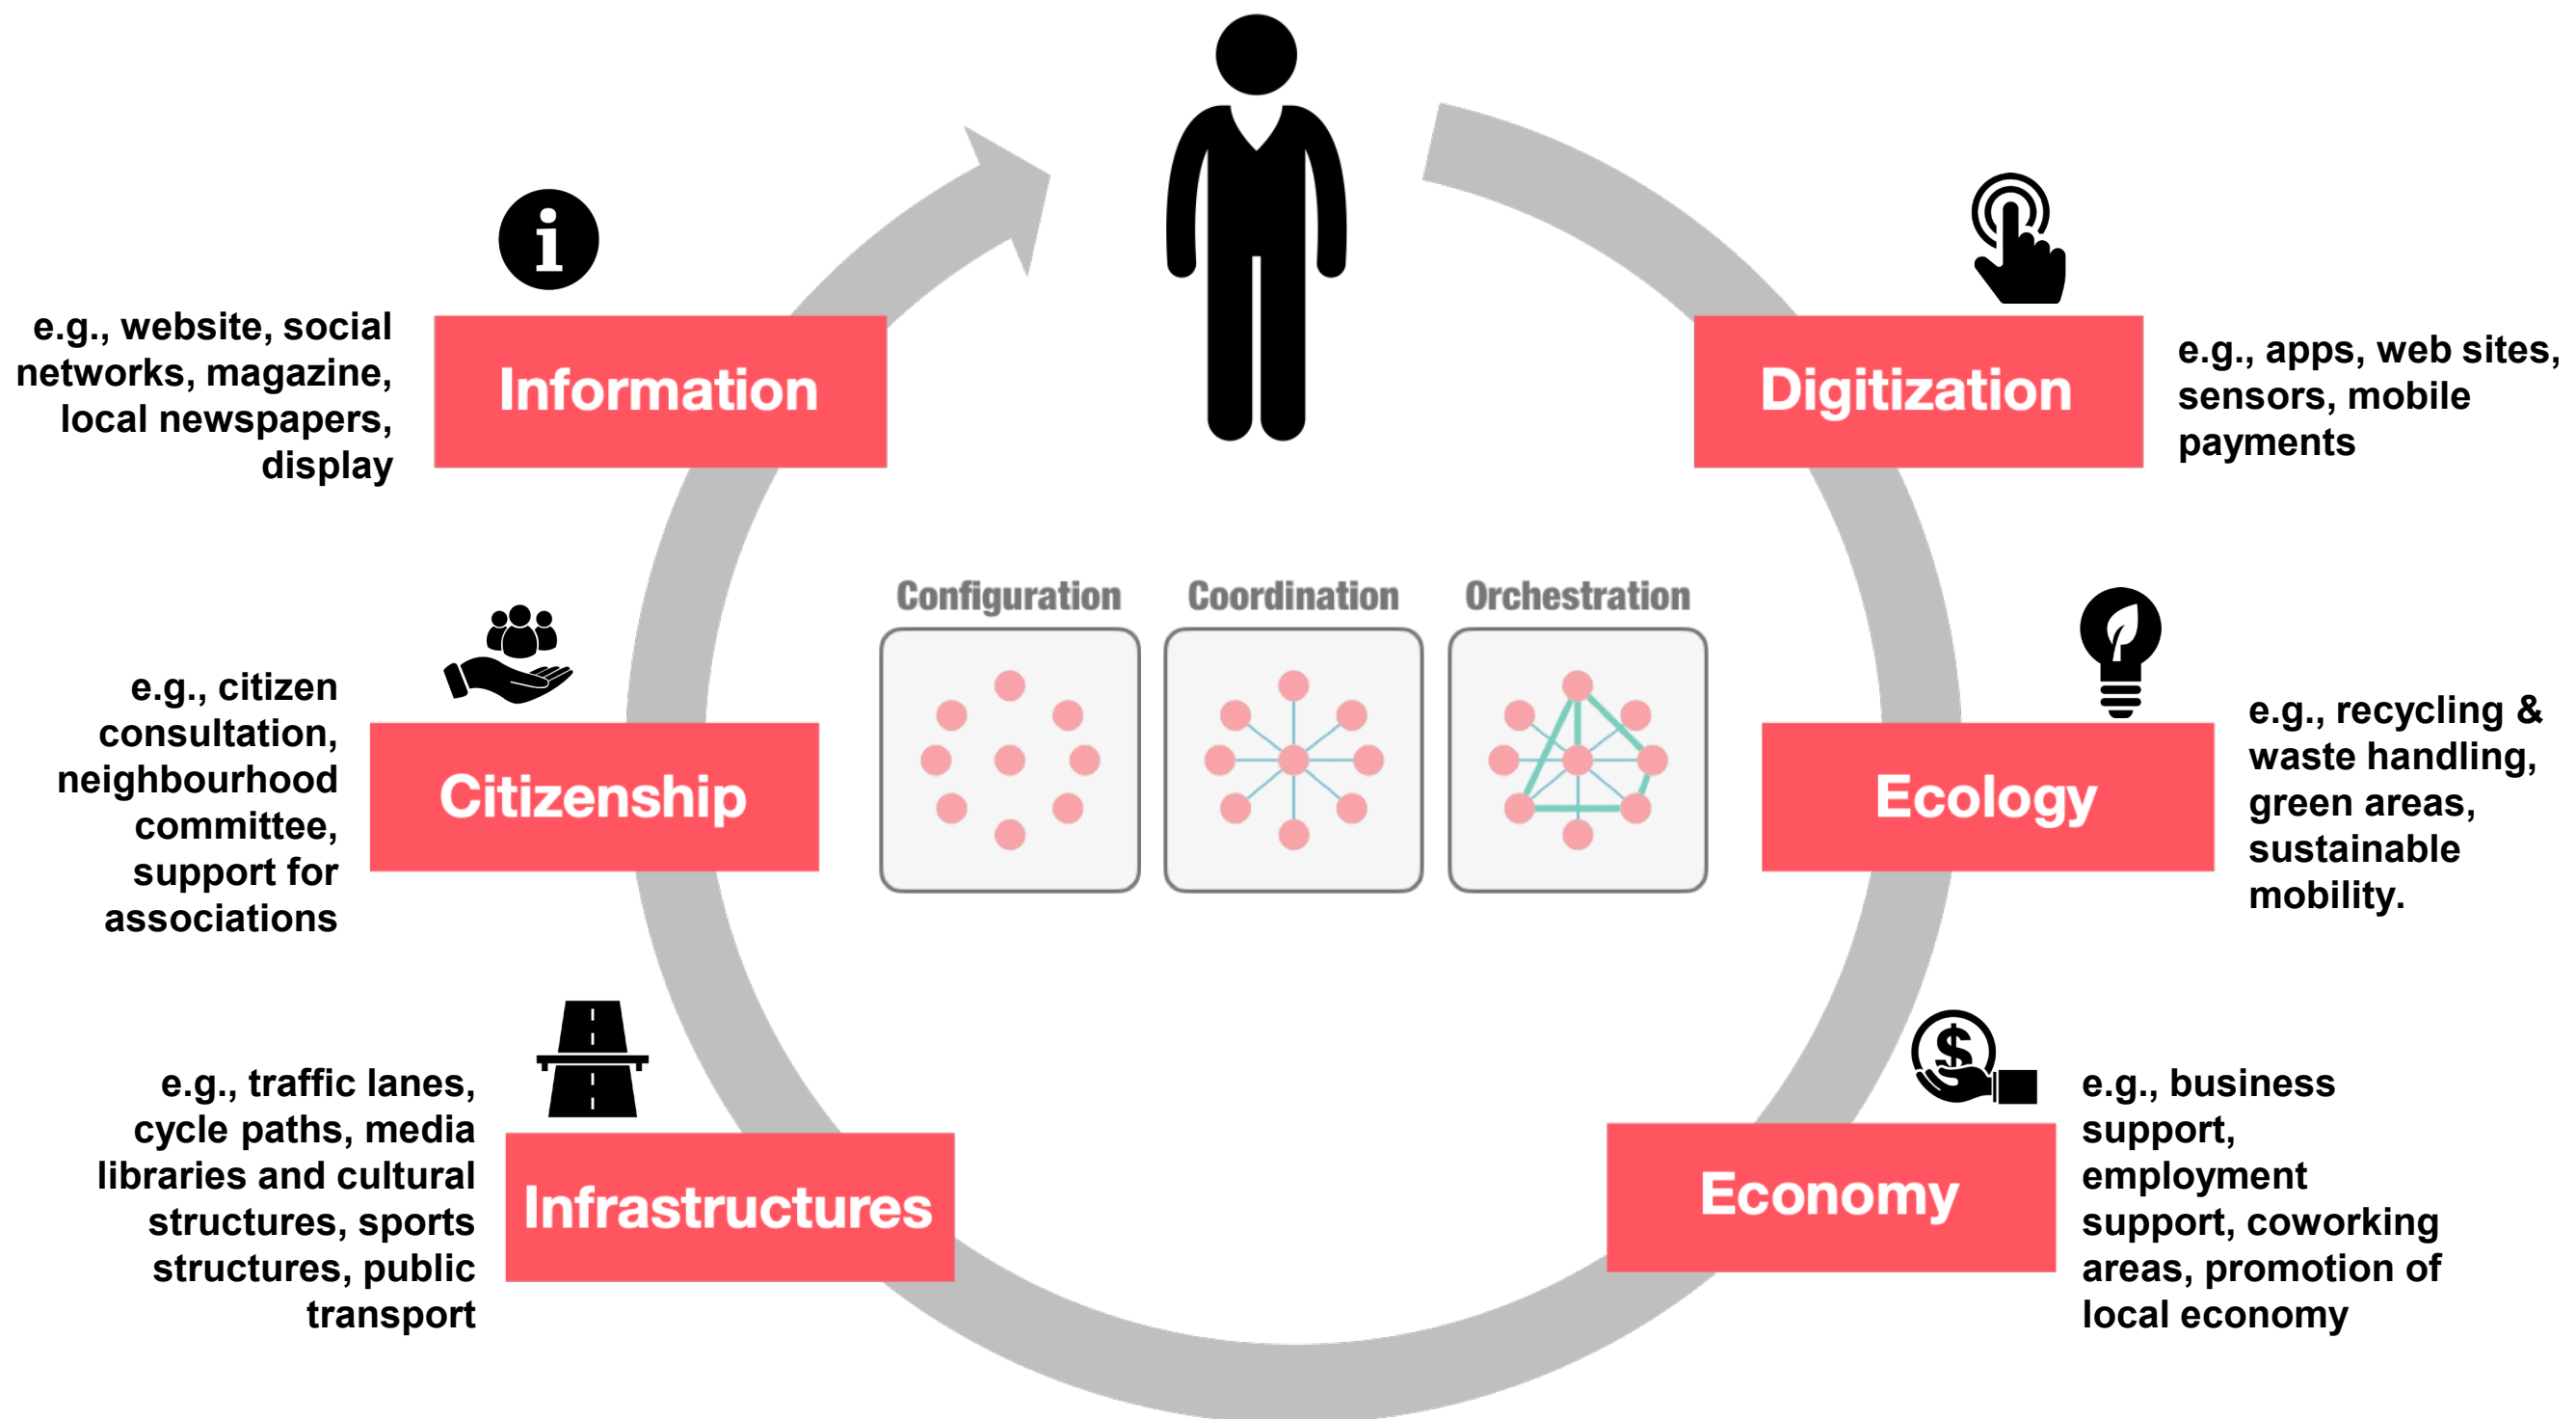

Orchestration

Harmonious (or
seamless) organization

Making Up the Smart City - Configuration, Coordination & Orchestration

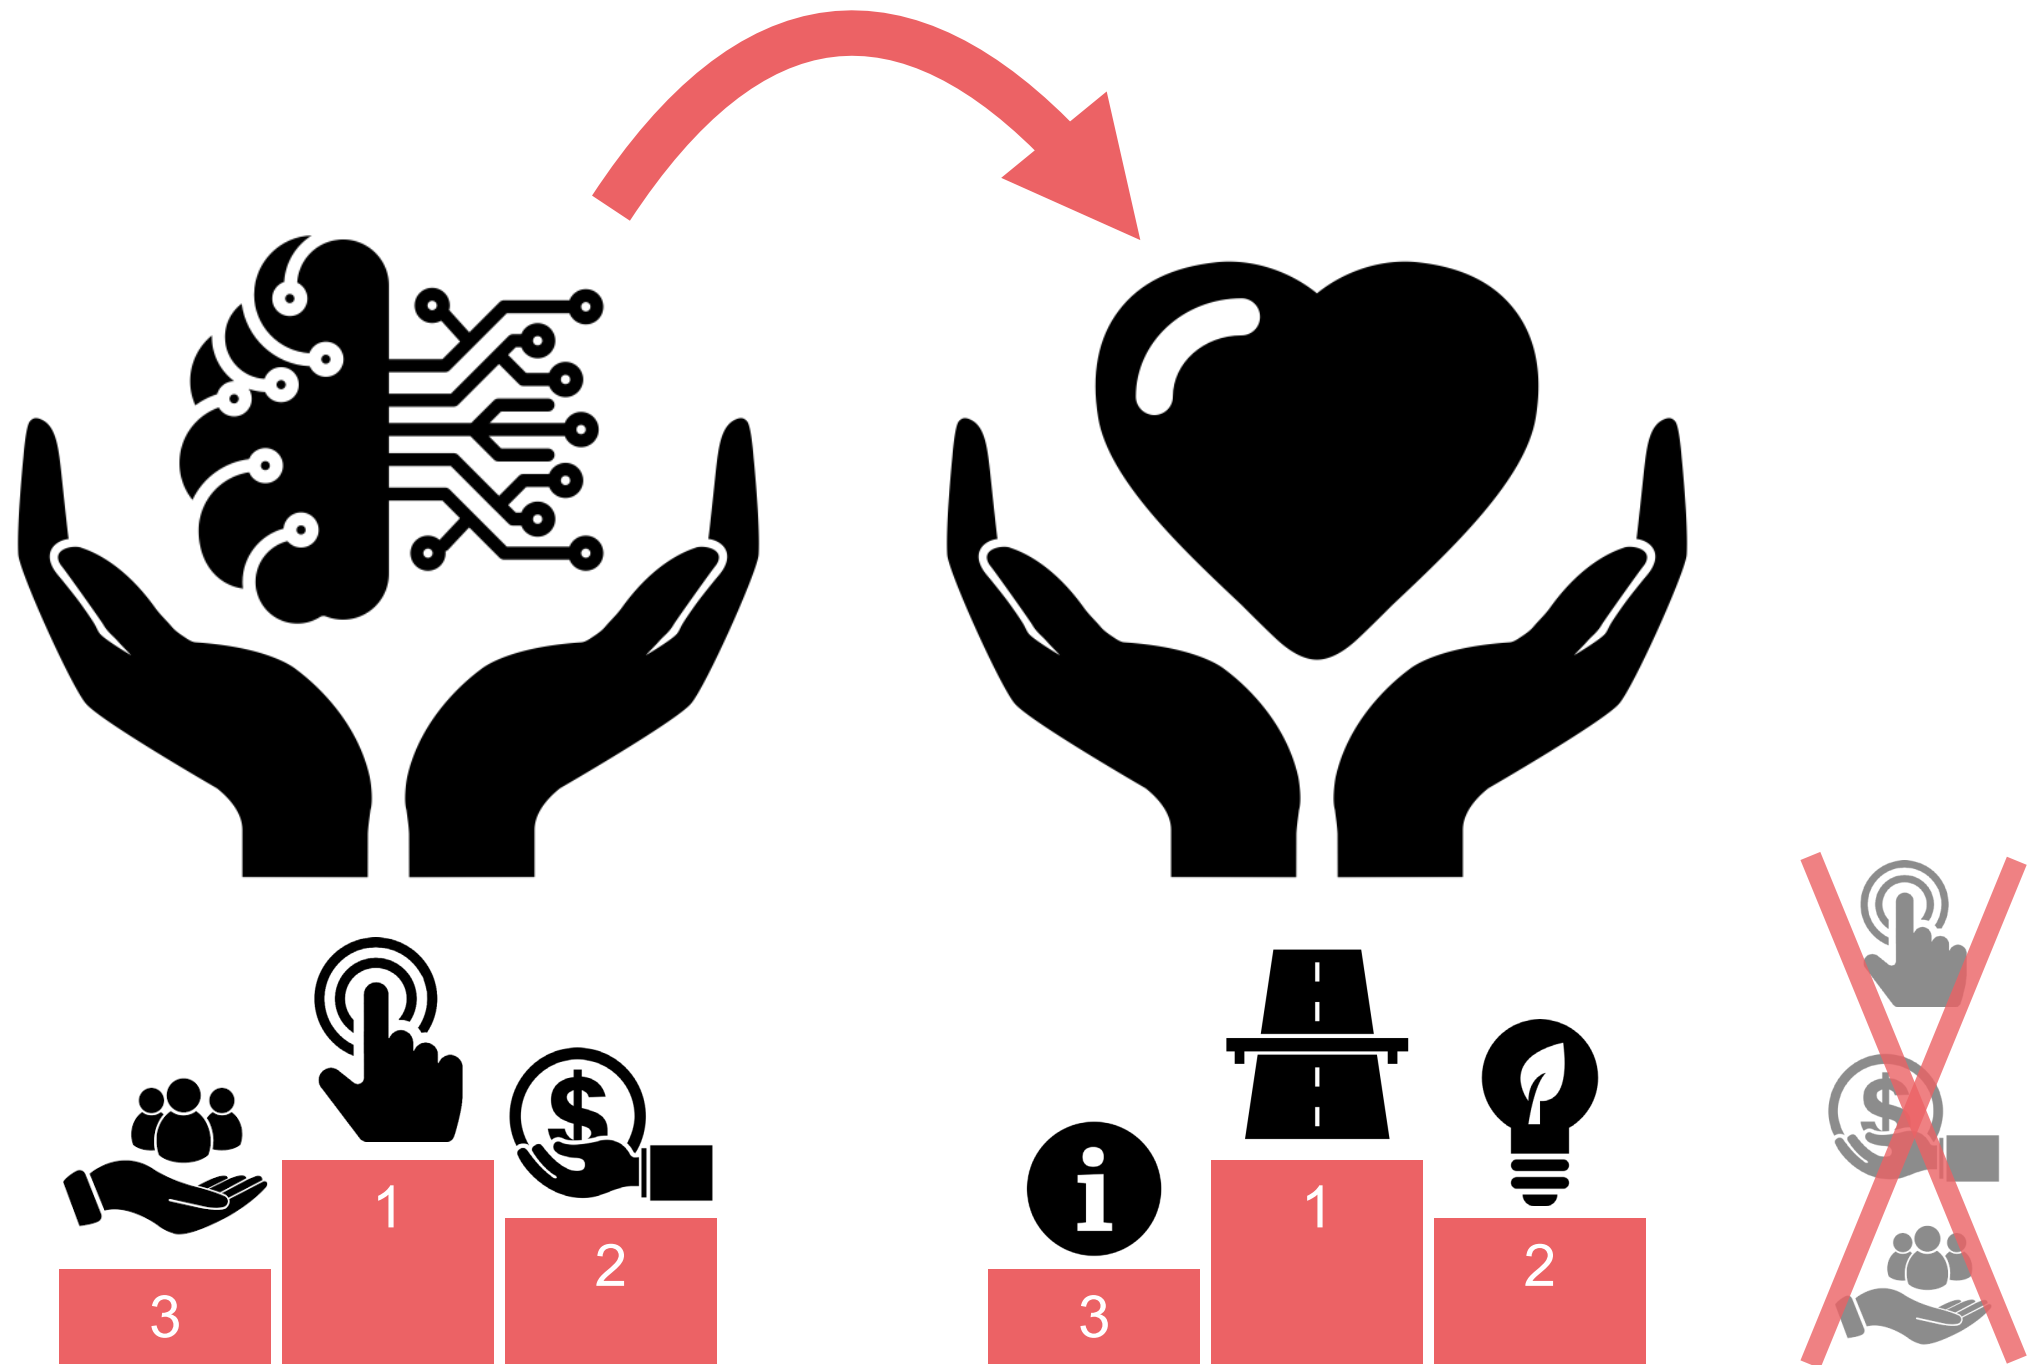

63 %

Think that their city is rather smart

10 %

Strongly agree that their city is smart

What makes the city smart and liveable?

Smart Cities

How does the smartness of the city help my to manage my life across various roles?

What makes the city smart and liveable?

- City is smart: coordination > configuration > orchestration
- Domain uses are driving the perceived smartness of the city:
- The smarter the city the higher the perceived well-being
- But: while uses of digital, economic, and citizenship-oriented domains are the Top 3 drivers of the perceived smartness of the city, those Top 3 do not influence the perceived well-being in the city.
- Top 3 drivers of well-being in the city: infrastructure, ecology, and information.
